Journal of Crystal Growth 197 (1999) 1026–1028

JOURNAL OF CRYSTAL GROWTH

Subject index

Cellular growth
– of aluminum zinc alloys 393
Computer simulation
– of buoyant melt flow 341
– of defect equilibrium 493
– of heat transfer 435
– of Ostwald ripening 973
– of two-dimensional impure systems 317
– of vertical Bridgman 983
Constitutional supercooling
– of alloys 992
– of cadmium telluride 397
Convection 210, 297, 307, 341, 552, 749, 811, 967

Dendritic growth
– of alloys 992
– of aluminum zinc alloys 393
Device characterization
– diodes 537, 557, 576, 586, 858
– electronic materials 106, 177, 507, 547, 571, 576, 581, 593, 599, 630, 646, 650, 663, 670, 675, 684, 707, 858, 865, 874, 905
– heterojunctions 507, 675, 858
– infrared detectors 547
– lasers 507, 529
– scintillators 471, 475
– solar cells 733, 833
– quantum dots and wires 372, 680
– quantum wells 113, 507, 799
Diffusional control
– of doping 537
– of segregation 749
– of vapor growth 513
Diodes, see Device characterization
Dissolution of,
– lead titanate 195
– potassium sulphate 388

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 449, 475, 517, 702, 1012

Heat flow control, of
– interface control 552
Heterojunctions, see Device characterization
Hydrodynamics, see Convection

Kinetics
– of defects 565
– of diffusion 743
– of growth 7, 37, 78, 84, 147, 155, 244, 271, 286, 317, 355, 497, 616, 789, 805, 874, 905, 944, 973, 992
– of impurity effects 263
– of interface control 789
– of nucleation 155, 263, 789, 927

Lasers, see Device characterization
Lasers, crystals for
– silicon nanowires 129, 136
Lysozyme 257

Melt growth technique
– by Bridgman–Stockbarger method
– – of aluminum–cerium systems 286
– – of aluminum–lanthanum systems 286
– – of aluminum–neodymium systems 286
– – of cadmium selenide 655
– – of cadmium telluride 406, 603, 607, 659, 707, 718, 724, 729
– – of cadmium zinc manganese telluride 694
– – of cadmium zinc telluride 427, 443, 635, 707, 718, 729
– – of copper indium diselenide 169
– – of gallium antimonide 1, 749
– – of indium arsenide 1
– – of mercury manganese telluride 688
– – of zinc mercury manganese telluride 698
– – of zinc selenide 466, 655
– by Czochralski method
– – of aluminum tungstate oxide 879
– – of bismuth germanate 865
– – of bismuth tellurite 210
– – of lanthanum galate 204
– – of lithium calcium aluminum fluoride 896
– – of lithium tantalate 889
– – of yttrium calcium oxyborate 228
– – of yttrium orthosilicate 901
– – theory of convection 297, 307
– by emulsification 263

0022-0248/99/$ – see front matter © 1999 Elsevier Science B.V. All rights reserved.
PII: S0022-0248(99)00037-8

– by floating zone method
– – of calcium lanthanum cuprate 825
– – theory of convection 967
– by high pressure Bridgman
– – of cadmium zinc telluride 641
– by travelling heater method
– – of copper indium diselenide 177
– – of mercury cadmium telluride 552
– – of quasicrystals 963
– – of zinc telluride 794
– by vertical gradient freeze method
– – of cadmium telluride 413
– – of cadmium zinc telluride 593
– – of indium gallium arsenide 769
– – of mercury cadmium telluride 593
– – of zinc selenide 413
– – of zinc telluride 413
– by zone melting
– – of tellurium-doped zinc selenide 471, 475
Microgravity, growth under
– of supercooled melts 355
– theory of convection in floating zone 967
Morphological stability
– of cadmium sulphide 612
– of interfaces 31

Nucleation
– of apatites 927
– of cadmium sulphide 616
– of gallium nitride 37
– of lysozyme 257
– of n-hexadecane 263
– of tungsten silicide 163
– of twins 455
– of yttrium barium copper oxide 379
Numbers
– Grashof 297, 307
– Hartmann 307, 341
– Marangoni 811, 967
– Rayleigh 297, 307, 341, 983
– Reynolds 811
– Rossby 297
– Taylor 341

Phase diagram, of
– Bi–Pb–Sr–Ca cuprate 141
– cadmium selenide telluride 485
– cadmium sulphide/cadmium telluride 743
– cadmium telluride 406
– lanthanum galate 204
– lead titanate 195
– zinc sulphide 485, 489
Precursor, for
– tantalum nitride 236
Purification, of
– zinc selenide 513

Quantum dots and wires, see Device characterization
Quantum wells, see Device characterization

Solid growth technique
– by recrystallization
– – of calcium phosphate 939
– – of zinc selenide 462, 480
– theory of heterogeneity 317
Solution growth
– by flux method
– – of potassium lithium tantalate niobate 1012
– – of strontium sulphide 504
– – of yttrium barium copper oxide 379
– by hydrothermal growth
– – of lead titanate 195
– by laser heated pedestal growth
– – of zinc lithium niobate 221
– by low temperature method
– – of aluminum potassium sulphate 921
– – of aluminum trihydroxide 244
– – of potassium dihydrogen phosphate 383
– – of potassium orthophosphate 911
– – of yttrium potassium tungstate 883
– – of zinc thiourea sulphate 216
– by sol-gel
– – of ferroelectrics 874
– by vapor diffusion
– – of urokinase 254
– theory of growth 944
Stefan problem of moving boundary problem
– of impure grains 317
– of microsegregation of binary alloys 325, 333, 355
– of vertical Bridgman 983
Superconductivity materials, high T_c
– film
– – of Bi–Pb–Sr–Ca cuprate 141
– – of PrCeCO 818
– – of YBCO 376
Surface structure
– of gallium nitride 37
– of II–VI compounds 571
Superlattices
– of CdTe–ZnTe–GaAs 1003
– of HgCdTe–HgTe 1003

Thin film growth, epitaxy
– by liquid phase epitaxy
– – of silicon carbide 147
– by metalorganic molecular beam epitaxy
– – of gallium arsenide 67
– – of indium gallium nitride arsenide 67
– – thermodynamic theory of III-nitrides 99
– by molecular beam epitaxy
– – of aluminum gallium arsenide 54, 762
– – of gallium arsenide 364, 372
– – of gallium nitride 7, 12, 31, 368
– – of indium arsenide 364, 372

– – of indium gallium arsenide 59, 84
– – of indium gallium arsenide phosphide 89, 95
– – of indium gallium phosphide 59
– – of indium phosphide 789
– – of mercury cadmium zinc telluride 529
– – of II–VI compounds 557, 616
– – of zinc selenide 557
– by pulsed laser deposition
– – of zinc oxide 523
– by spray pyrolysis
– – of II–VI compounds 858
– by sputtering
– – of YBCO 376
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of silicon germanium 113
– – through evaporation and condensation
– – – of silicon carbide 155
– – through metalorganic chemical vapor deposition
– – – of aluminum gallium nitride 73
– – – of cadmium zinc telluride 626
– – – of gallium arsenide 777
– – – of gallium nitride 37, 73
– – – of indium gallium arsenide 25, 755, 777
– – – of indium gallium nitride 48, 78
– – – of indium phosphide 19
– – – of mercury cadmium telluride 542, 547
– – – of zinc selenide 507
– – – of zinc sulphide 805
– – through sputtering
– – – of gallium arsenide germanium 783
– – – of magnesium oxide 849

Vapor growth technique
– by chemical transport
– – of zinc selenide 449
– by chemical vapor deposition
– – of potassium tungsten oxide bronze 1008
– – of silicon carbide 841
– by close-space vapor transport
– – of cadmium sulphide 733
– – of cadmium telluride 733
– – of cadmium zinc telluride 799
– – of gold 955
– – of zinc selenide 497
– by direct vapor transport
– – of tungsten selenide 833
– by evaporation and condensation
– – of barium titanate 905
– – of cadmium zinc telluride 423, 663, 666
– – of molybdenum trioxide 186
– – of silicon carbide 155
– – of zinc selenide 449, 455, 513
– – of zinc telluride 423
– by Markov method
– – of zinc selenide 517

Whiskers growth
– of silicon nanowires 136
